

Assistive Listening Devices

Hearing aids are great — they're small, portable and custom-fit to you and your hearing loss. But our world places great demands on hearing, and sometimes hearing aids are just not enough.

Test your hearing:

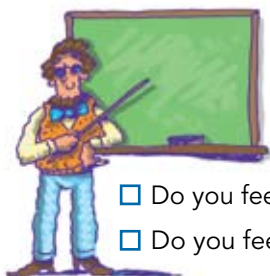

Do you have trouble hearing on the telephone?

Do you have difficulty hearing the phone ring?

Do you have difficulty hearing the alarm clock?

Do you have difficulty hearing the doorbell?

Do you worry that you won't hear your baby crying in the next room?

Do you feel left out of conversations?

Do you feel left out at the movies?

Do you feel left out at meetings?

Does your family complain that the TV volume is too loud?

If you answered "yes" to one or more of these questions, an assistive listening device may be the answer! Assistive listening devices are designed to provide additional hearing help in difficult listening situations.
